

# KNOW THE TRUTH ABOUT VACCINATIONS!

Your best friend's life may depend on it!

Do you know...

🐾 The SAME dose of vaccine is given to both a Chihuahua and a Saint Bernard.

🐾 "Even with rabies vaccine, the label may be misleading in that a three year duration of immunity product may also be labeled and sold as a one year duration of immunity product."  
[quote from Colorado State University Teaching Hospital, <http://www.calmananimal.com/vaccine.html>]

🐾 Brain inflammation from some vaccines could potentially cause an increase in aggression in some breeds.

🐾 Vaccinating your pet while it has even a "minor" allergy or infection can not only negate the immune-producing effect of a vaccine but also cause serious injury or death.

🐾 Stress associated with surgery, going to a new home, or travel can interfere with a pet's ability to produce a positive immune response. That it can, in fact, contribute to life-threatening reactions.

🐾 Some vaccines might not be necessary for your pet or in your particular area. These are called non-core vaccines. These, too, can cause serious adverse reactions.

**Before you allow your vet to give that next injection, EDUCATE YOURSELF!**
